INTRODUCTION

Software Developer with experience building enterprise web applications and automation systems using modern backend and frontend technologies. Passionate about exploring how AI can enhance everyday workflows, reduce manual processes, and improve decision-making in software systems. Recently focused on experimenting with LLM technologies, AI agents, and workflow automation, including fine-tuning lightweight language models for structured data tasks and deploying AI agent platforms in cloud environments. Enjoy building practical AI-driven solutions that integrate with real-world systems, bridging traditional software engineering with emerging AI capabilities. Continuously exploring ways to combine software engineering, automation platforms, and AI models to create more intelligent and efficient tools for both developers and end users.

TECHNICAL SKILLS

- **Programming Languages:** TypeScript, PHP
- **Frameworks & Libraries:** React.js, Next.js, Material UI, Angular, Laravel
- **Testing & Tools:** Cypress, Jest, PHPUnit, Postman, Figma
- **Cloud & Databases:** AWS (S3, EC2, Lambda, SQS), Docker, CI/CD pipelines, MySQL
- **AI & Automation:** n8n, OpenClaw, LLM Fine-Tuning (LoRA), Codex
- **Methodologies:** Agile, Scrum

PROFESSIONAL DEVELOPMENT

- **Solution & System Thinking** Business process analysis, solution scoping, and translating operational requirements into scalable technical implementations.
- **Workflow Automation & Integration** Design of automation flows, event-driven processes, and system integrations to improve operational efficiency and reduce manual effort.
- **Architecture & Engineering Practices** Modular system design, reusable component strategies, API-driven development, and scalable application patterns.

- **Delivery & Collaboration** Full SDLC ownership, Agile delivery, cross-functional collaboration with product and stakeholders, and production system support mindset.
- **Continuous Learning & Technical Growth** Actively expanding expertise in enterprise automation ecosystems, cloud platforms, and low-code solution architecture; self-driven learning in Python and containerization technologies.

WORK EXPERIENCES

Software Developer (Full stack)

Herd HR – Singapore | *July 2025 – Present*

- Maintain and enhance a Laravel + Angular-based HR system used across regional clients.
- Implement new features: roster workflows, system reminder
- Refactor legacy code and resolve critical bugs to improve system stability and maintainability.
- Collaborate with the product to ensure feature delivery aligns with business goals and user needs.
- **Key Technologies:** Laravel, Angular, MySQL, Microservices

Software Developer (Full stack)

AYP Group – Johor Bahru | *Feb 2024 – June 2025*

- Built and maintained full-stack web applications with TypeScript, Laravel, and AWS, supporting business users across APAC.
- Wrote unit and integration tests using Jest and Cypress, maintaining over 85% test coverage.
- Participated in code reviews and architecture discussions to improve scalability and enforce best practices.
- Automated CI/CD pipelines for staging and production environments, reducing manual deployment errors.
- Worked closely with QA and product teams to align sprint goals and deliver high-impact features on schedule.
- **Key Technologies:** TypeScript, Next.js, Cypress, Jest, Laravel, AWS

Senior Software Developer

XeerSoft Sdn Bhd – Johor Bahru | *Jan 2021 – Feb 2024*

- Leading juniors and interns for daily task.
- Redesigned major frontend modules using React.js and MVC principles, improving page load speed with better UX.

- Developed reusable components and custom React hooks, reducing duplicated codebase.
- Integrated REST APIs with the backend team and resolved cross-origin and latency issues to improve data sync reliability.
- Created an internal knowledge base for onboarding and developer guides, reducing ramp-up time for new hires.
- **Key Technologies:** React.js, PHP, HTML, JavaScript

EDUCATIONS

Bachelor's Degree - Software Engineering

Universiti Tun Hussein Onn Malaysia | *Aug 2017 – Aug 2020*

- First Class Honors (CGPA: 3.83 / 4.00)
- Dean's List for all semesters.
- Actively joined university association activity as a committee.
- Chief of Secretary for Festival Tiong Hua UTHM 2019
- Treasurer and technical support for Tiong Hua Chinese Cultural Carnival UTHM

Malaysian Higher School Certificate (STPM)

English College Johor Bahru | *June 2015 – Dec 2016*

- Science Stream (CGPA: 3.08/4.00)
- President of bowling club

PROJECTS

Personal Portfolio – lihsheng.space

Built and maintained a personal portfolio site showcasing professional experience, blog posts, and tech experiments. Used to explore front-end deployment, responsive design, and third-party API integrations.

Lucky Draw Application - [AnyDraw](#)

A web-based lucky draw platform using Vue 3, Vite, and Tailwind CSS, featuring interactive selection tools (wheel spin, random number, card picker) powered by cryptographically secure randomness via Web Crypto API. Implemented modular components with Composition API, local persistence, animations, and automated GitHub Pages deployment, focusing on performance, usability, and fair selection logic.

n8n

Designed and implemented workflow automation solutions using n8n to integrate systems, trigger business processes, and automate operational tasks. Built event-driven flows, API integrations, and scheduled jobs to reduce manual work and improve system responsiveness.

LLM Fine-Tuning for Schema Matching

Fine-tuned Qwen 3.5 0.8B using LoRA with Unsloth to improve schema matching between structured datasets by training on domain-specific mapping examples.

AI Agent Platform Deployment (OpenClaw)

Deployed and operated a self-hosted OpenClaw AI agent platform on Zeabur, configuring runtime environments, resolving sandbox execution issues, and experimenting with AI-driven automation workflows.
